

Data Management Systems used for Student Assessments

Putnam County Charter School System adopted Thinkgate for student assessment data management in 2006. In 2014, Data Director was adopted for our high school. These systems provide educators a platform for administering Pre and Post Tests and Benchmark Tests. The data from these tests is used to guide instruction. These systems provide a variety of reports to our administrators and teachers to diagnose strengths and weaknesses of individual students, classes, schools, etc.
